Attn: Norman Lougee

Dear Norm:

Fairchild Semiconductor is currently considering expansion and revision of production facilities located at 464 Ellis Street. These plans could include a considerable increase in flow of industrial wastewater.

At present all sanitary and industrial wastewater flows through an 8" line to a manhole NE of the building. This line would not be adequate for increased flows.

We are planning a new industrial wastewater neutralization system, and would like to discharge it directly to the manhole via a new sewer. The present 8" line would then be exclusively sanitary.

I would like to know the reserve capacity of the 15" sewer in Ellis Street, and how much additional flow Fairchild Semiconductor can discharge to that sewer.

Sincerely yours,

*B. Robert Harper*
